

Provito™

made with  ingeo™

There's Only One.

The real breakthrough in pad technology is now a reality. Following nature's way of making sugar in plants through photosynthesis and converting it into a polymer chain, our partner, NatureWorks, provides the plant-based Ingeo™ pellets we use to make our new Provito™ (For Life) pads.

Naturally advanced Ingeo is used in food packaging, flexible films, apparel, home textiles and now in Provito pads. Ingeo's carbon footprint is 60% lower than oil-based materials like PS and PET. That's 60% less greenhouse gases so we protect our one and only living planet with the one and only plant based pad – Provito from Treleoni, of course.

Pads from Plants

BEST FOR:

Daily usage on softer to medium finishes with UHS equipment.

PERFORMANCE:

Moderately soft binders and fine packed fibers create a dense burnishing pad. It works with the machine to enhance gloss on softer finishes.

EQUIPMENT:

Battery, Cord Electric, & Propane
(1500 to 3000 rpm)

SIZES:
13" – 28"

PACKAGING:
5 pads per case

SIZES:
27"/28"

PACKAGING:
Also available –
2 pads per case

What makes ours better?

- **Top performance** is not compromised by a unique construction using plant-based materials.
- **Your carbon footprint is reduced** when you choose to use Provito over other comparable UHS pads. Provito is the only pad made from plants.
- **Available in a range of sizes**, any finishing job can be accomplished with this technologically-advanced, high-quality product from Treleoni.
